Subject: LARSON LIMESTONE M/049/011

I received a call this morning from Steve Brown, Construction Management Services, Inc., (801) 221-2925, P.O. Box 2059, Orem UT 84059. He is looking at the various permit requirements associated with the addition of a limestone briquette/pellet type plant out at Larson Limestone. They would like to put this plant on the fast-track if possible (~up within 90 days). He has talked with Buck Rose of Utah County. The County does not want to issue a conditional use permit until Larson Limestone clears things up with the State (Division).

I gave him a brief summary of the permitting situation at Larson and told him of the case before the Utah Supreme Court. He wanted to know what Larson would need to do to satisfy the Division's concerns and how long that would take (hypothetical question). I told him they would probably need to comply with the Board Order by submitting a LMO-NOI and posting a bond. This could take close to 6 months from initial submission to final approval. Steve-Would Larson be able to continue operations and/or install the plant during the interim? TG-That would be a management decision, but in other cases normal mine operations have been allowed to continue as long as the operator is making a good faith effort. In some cases, if the operator posted a bond first, the Division has allowed some new activities depending upon the scope and impacts. I am not sure where the pending court case is at or what effect it would have on the permitting process. We will send Steve a copy of the rules and a LMO-NOI permit application.

A COPY OF THIS MESSAGE WILL BE SENT TO THE LARSON LIMESTONE FILE
